

Alpine Spine Center at Littleton Regional Healthcare

Utilizing a team approach, the Alpine Spine Center at LRH specializes in minimally invasive neurosurgery procedures and the treatment of spinal disorders, disc disorders, spinal fractures, and spinal stenosis.

Neurosurgery is the prevention, diagnosis, surgical treatment, and rehabilitation of disorders which affect any portion of the nervous system. Our surgeons primarily focus on the surgical treatment of disorders of the spine.

Minimally invasive spine surgery utilizes modern technology, advanced imaging techniques, and special medical equipment to reduce tissue trauma, bleeding, radiation exposure, hospital stays, and recovery time by minimizing the size of the incision.

Most disorders of the spine do not require surgery. Therefore, we use a more holistic approach for those who have had little success with conservative methods. Our practitioners are available to provide non-surgical techniques, such as injections in conjunction with other various therapies.

Talk to your primary care provider about a referral to the Alpine Spine Center today.
